## Forward

**The future is not looking good. Abuse, neglect, and overuse have damaged Earth. Below are the surprising views of what the Earth in the year 3015 may become.**

It is with extreme pleasure that I introduce my class, Effective Writing: Emails to Essays Level 5, in this wonderful way. After suggesting the idea of living in the year 3015, the class brainstormed about what our world might be like at that time. We then broke down into 4 teams. Each team focused in on a part of our future world. One group imagined Saint John's University's future. While another group decided that the future inhabitants would live under the Earth's surface. A third group left our planet entirely. The fourth group discussed the possibilities of staying and still living on the Earth's surface despite Earth's issues. The groups chose team leaders, and they worked together using their newly learned skills outlining ideas.

What was completely remarkable was how they worked and supported each other and pulled together this book. Special praises are for the four team leaders: Acsim Chuman Xie, Linruo Zhang, Thomas Hongyi Zhang, and Frank Yifei Du, who made it possible to produce such a book in a very short time span. Kudos to them all!

## I) Introduction

A) We have a time machine.

- 1) We are in 3015.
- 2) What is it?!

## II) Body

A) In St. John's University

- 1) What does the place look like?
  - (a) It will still look like a school, but it will be silent and dirty.
    - (i) Campus is a military base.
- 2) Where do you live?
  - (a) I'm living on campus with our soldiers.
- 3) How do you survive?
  - (a) We don't need to breathe the air and drink water.
  - (b) We don't need to eat anything.
  - (c) We need chemical microelement and rays of light. We can use the rays of light to do photosynthesis.
- 4) What do the people look like?
  - (a) Alien

- (i) Taller than 2015.
- (ii) Thinner than 2015.
- (iii) Big eyes.
- (iv) Blue skin.

5) What does the planet look like?

- (a) No ocean.
- (b) There is no food.
- (c) Ray of light still exist
- (d) World War III.
- (e) A lot of weapons
  - (i) Gundam
  - (ii) Digital Monster

### III) Conclusion

- A) In the end, I don't want to imagine this world. We don't like this world, because it's so dangerous. There are full of sadness. We need peace and resources.
- B) Therefore, we should cherish our life now. Please don't waste of all gifts from environment. Be kind to our nature.

# A Bad World in 3015

By Acsim Chuman Xie

As the saying goes, “In the future we can have a lot of imagination”. Many people must have a dream about the future. Now if we have a time machine, we can use it to go to the future to the year 3015. This is a world is full of unknown things after 1000 years. Imagine now that we are in 3015. My ideas of this are listed as follows:

First of all, World War III begins. Everyone needs to fight in the war because the resources are limited, so we need to fight for survival. Saint John’s University still looks like a school, but our campus has become one of the military bases in the world. It’s silent and dirty. Everywhere there is residue and debris from weapons. Noone wants to say anything about happiness, because it’s much too painful.

At that time, our people look like aliens. We are taller and thinner than people in 2015. We have big eyes and blue skin. The reason why we have blue skin is that we don’t need to breathe the air, drink water, and eat food, so we use the rays of light to do photosynthesis. The blue skin can help us to absorb the blue-violet light. There is no ocean or air, but the earth still has chemical microelements and rays of light. As we know, the chemical microelements are rare, but it’s very important for people to survive by using a

complementary ray of light. Thus, people fight for resources so they can survive.

At that time, the scientists create the Gundams, which are the new intelligently controlled fighting robot machines. They can fly and shoot cannons. Everyone at the university must go to the war and drive Gundams. Not only have we Gundams, but also Digital Monsters. Each person's Digital Monster is different. For example, yours is a snake, his Digital Monster is an ostrich. These weapons will protect you.

In the end, I don't want to imagine the world in 3015. I don't like this world, because it's so dangerous and there is full of sadness. We need peace and resources. However, if we waste of each resource on the earth now, the terrible world will be true, and it will come soon. Therefore, we should cherish our life now. Please appreciate all gifts from nature, and be kind to our environment. Thus, we can have a gorgeous world in our future.

## The Gundams

**By Vincent Yuxiang Zhang**

I am a public person that had an accident. I time travelled 1000 years in the future to the year 3015. This year, humans were in big trouble. Resources were used up. However,

they found new resources on the moon. I joined Saint John's University military base. World War III will come soon. We have to fight and need resources.

Mars is a horrible place. There is a zombie, dragon, alliance. All in all, it is not fun to travel to Mars. Although it is horrible, humans aren't worried about that. As the technology improves, we have the Gundam that is a like the human body weapons. Our base is training the young people on how to drive that machine and use it to destroy the enemy.

At that time, people look no different than in 2015, but I think the food, and water is poorer than before. So at this time the people look very thin. The new American president solved the problem of obesity. Even though the food and water was barren, humans who lives the future have to build up a high-tech city. It's a funny thing that the human were becoming more and more lazy, because they made the robots. Their robots can do anything they want, and people just sleep all day. I'm very concern about our battle, will we be able to win Mars???

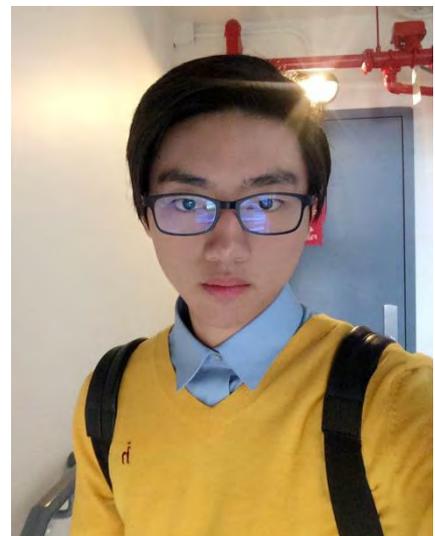

Ten days later, we were already fighting on Mars. Good luck to us.

# The future

**By Hao Wang**

I am a modern man, I use the time and space tunnel to leave the old world, but this new world was changed a lot from the past.

First, the pollution is worse. The ocean is gone, we can't breathe the air because it is seriously polluted, and it's filled with poisonous gas. People now photosynthesize like the plants. We put them in the greenhouse to get fresh oxygen. When people want to go out, they must wear a special mask.

Second, I am in the St John's University, and I find different things with the students. They don't need to attend class, because they need to take part in the World War III. The reason they go to war is because of the demand for resources. Thus the war begins. Our students need to go to the war. At that time, the scientists create the Gundams, which are the new humanoid fighting robot machines. It can fly and has artillery.

Then, our Saint John's University becomes one of the bases in this world. Everyone at the university must go to war, and drive the Gundams. Our building looks like it was used for education. In fact, we put the Gundams in it or underground. When the enemy missiles attack our buildings, it will form a layer of power crystal mesh for protection. Not only do we have Gundams, but also we have combat tyrannosaurus beast. Everyone is different. Maybe your pet is a snake, his is an ostrich. It will protect you. This is the result of by scientists genetically modified(gm) animals.

The fact is that, many men died in this war. We need more people to go to it, and help us to win this war. Even Aliens don't need to attend class, because they need to take part in the World War III.

# Protect Our Earth

By Qianyuan Li

Everyone has a fantasy about the future. If we have a time machine, we can use it to go to the future in 3015. We don't know what will happen after one thousand years, but we can imagine now that we are in 3015.

To begin with, students will not need to go to school. In other words, maybe they will not go to school because World War III begins, and everyone needs to attend the war. The cause of the war is demand for resources. The Saint John's University still looks like a school, but our campus has become one of the military bases in the world. All military factories are underground.

Second, I think at that time we don't need to eat food and breath the air, on account of pollution and evolution. Maybe our skin is blue or gray, due to the polluted atmosphere. We can't see the sun. To be able to survive it depends on our perseverance.

At that time, scientists have invented the Gundam which is the new intelligent control robot fighting machine, all the people lean to drive the Gundam to fight. Everyone will has a Digital Monster, and everyone's different. Some Digital Monsters are flying elephants, other's Digital Monster are horned serpents.

To be honest, I don't like this world. It is full of conflict, and resources are plundered. There is no happiness, and no warmth in the world. So, we can't continue to pollute the earth, we must cherish the resources, and protect our earth. Don't let the world become like that.

### **Outline Living under the earth in 3015.**

**Group leader: Linruo Zhang**

**Group members: Linruo Zhang, Allen An An, Kate Jiayue Zhang , Lariena Yuting Li, Ben Chengyuan Wu.**

- I) Introduction
  - A) 3015
    - 1) Future
  - B) Stjohns
  - C) Pollution is worse
    - (a) No water
      - (i) No ocean
      - (ii) Can't breathe the air
  - D) Living under the ground
    - (a) People can make their own life
      - (i) glow
  - E) zombies
  - F) Dragons
  - G) Aliens
  - H) People are taller than before

1) Bigger head

II) What does it look like living in under the ground? (BODY)

A) People dug a big hole

1) Build some house on the wall under the ground

(a) Pillar braced the ground

2) There is a Wanda plaza

(a) People have fun here such as KTV, coffee, bar, movie, restaurant, supermarket and shopping mall.

(b) Someone dancing on the Plaza

3) Two zombies is having a wedding

(a) A dragon makes eruption to celebrate this wedding. (fireworks)

(b) Another dragon makes fountain.

(c) These two dragons are couple, and they have a child which is flower boy for this wedding.

4) People use super power up to the ground

(a) Above ground is worse than under the ground.

(b) There is a group of people who live under the ground

(i) Someone who lives above ground wants to live under ground.

III) Conclusion

A) Everybody likes this place.

# Future Story

by Linruo Zhang

This is a story about the future in the year of 3015. Things change differently. The pollution is worse than before, and everyone cannot breathe the air, there is no ocean, and no water. Moreover, there are many different species in this world such as zombies, dragons, aliens, and so on. They are living in four different places which are St John's University, the top of the earth, under the earth, and outer space. I live in the underground.

People dug a big hole under the ground. In order to support the whole ground, there is a pillar that braces the ground in the middle. Here people are very peaceful. Thus, there isn't any war in this small world. Chiefly, it looks like a group or a family without any arguments. Besides, they also have superpowers to go anywhere like they go above the ground easily and quickly. There are some people who don't live under the ground and really want to live there, because this place looks like a fictitious land of peace.

Moreover, there is a plaza called Wanda. It is located under the ground, which is the middle of bustling place. Each species are having fun there. There are TV stations, theaters, restaurants and so on. Furthermore, it has big supermarket and a shopping mall. They can do everything there without going outside. There are also some other species dancing on the plaza. Therefore, each species wants to come here to enjoy their weekend. This is because this is the place they can not only have fun, but also feel warm from others.

Additionally, there is a wedding for two zombies on the plaza. There are two dragons that are flying. One is making an eruption to celebrate a wedding. It is like fireworks. Another is making fountain. There are many petals dropping down from people who are higher up than these species. These two dragons are a couple, and they have a child which is a flower boy for this wedding. I am one of the honored guests. I can sit here and enjoy these two zombies' wedding.

In conclusion, although this is an earth with pollution and a poor environment, I still think it has nice groups of different species living under the ground. They look like a family with true and pure love because they all like it here, include me.

## The future

By Allen An An

It's 3015 now, we found a time machine in our class and traveled to 3015. We are at Saint John's University now. Everything changed and the population is worse, we have no water, no ocean, the most important thing is that we can't breathe the air.

We are living under the ground. People make our own life here. We make food, and build our houses, and so on. We have a lot of new friends, like zombies, dragons, and aliens. People are taller than before. We have bigger heads, smaller feet, and longer arms. If you ask what it looks like living in under the ground I would describe it to you. People dug a big hole under the

ground, we build our houses on the wall and a pillar braces the ground. We have our Wanda plaza. We spend a long time to build up a Wanda plaza. People have fun here. We have KTV here, eating place here, and we also have coffee. We can drink in the bar, because someone makes the wine by themselves. We also have cinemas, but we can only watch some old movies. It's cool. There is a shopping mall too; we can buy our clothes, shoes, and these kind of things. And people like to go dancing at the Wanda plaza.

There are two zombies making a wedding. They love each other, and people come to celebrate with them. A dragon makes eruption to celebrate this wedding, just like making fireworks; another one is making a fountain. These two dragons are a couple, and they have a child which is their flower boy for this wedding. People use super powers to go up to the ground. The ground is worse than the under the underground, so the people really want to go to the underground place. The most important thing is that we get on well with each other. This is the best thing ever.

# The Story of the Future

**By Kate Jiayue Zhang**

Right now it is 3015. Everything is changed. Everything is different.

There are zombies, dragons and aliens in this world. Some live at Saint John's University, some are live up in the air, and some are living in the underground.

We live in the underground.

Chiefly, the pollution is worse and worse. The sky is gray. Also, there is no ocean on this world. The air is almost gone. Everything cannot breathe the air. It is too hard to live on the surface ground. So we live in the underground.

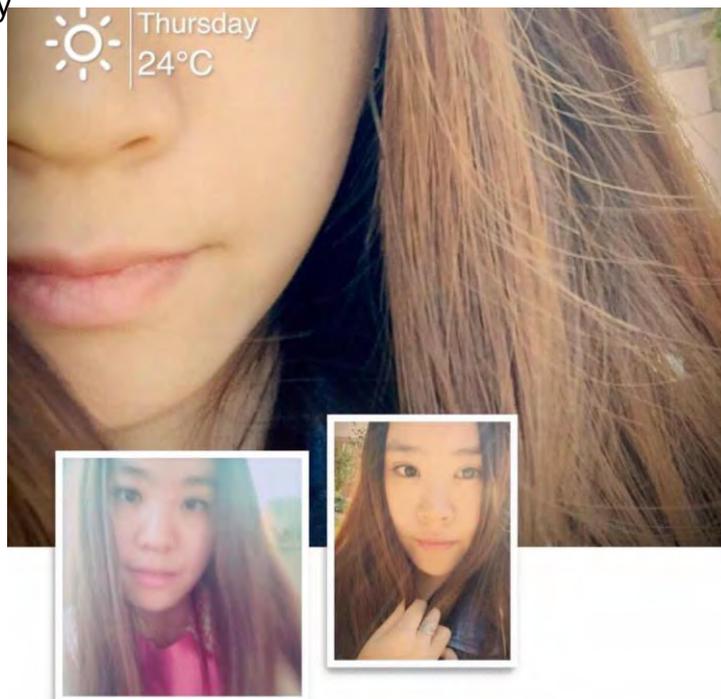

Everyone can glow by themselves, so they do not need the lights. They also can make their own lives.

Afterwards, people dug a big hole for their home. They also can dig a small hole for their personal places. It is free to make a hole. However, everyone needs to respect everyone else. Actually, people who live in the big hole are all very nice. They never argue and fight. People who live in the underground find it easy to go to the surface ground. Yet, people who live above the ground find it very hard to go to the underground. The reason is the underground people do not want to everyone else to damage their houses.

Furthermore, there is a wonderful plaza in the underground. The name of that plaza is Wanda. People can buy anything in this plaza. Also, there are many fun places in the plaza, like KTV, coffee stores, bars, cinemas, restaurants and so on. As a result, people can do whatever they want in this plaza. That is why people who live in the underground do not want to go above ground.

In addition, we have two zombies. There are two zombies having a wedding today. Also, they have two dragons that are celebrating with them. One dragon is flaming, the other one is making a fountain of water. These two dragons are a couple, and they have a baby dragon who will follow a son of these two zombies who are getting married. You can image how great this is for this wedding.

Finally, this place is where we live. Do you not think it is wonderful? Yet I feel the best thing is not our house. It is that we do not have any arguments and fighting anymore. Everyone is very nice to the other people. Although we have many different types, like zombies, dragons, aliens and so on. It is a big perfect family

# Going to the future

**By Lariena Yuting Li**

One day, I felt very tired. I went home to bed and fell asleep. And then in a blink of an eye, it is already the year 3015. You must wonder how I am alive for so long. In fact, because the times are different, technology is more developed. The world has created an elixir. Everyone can live in the world.

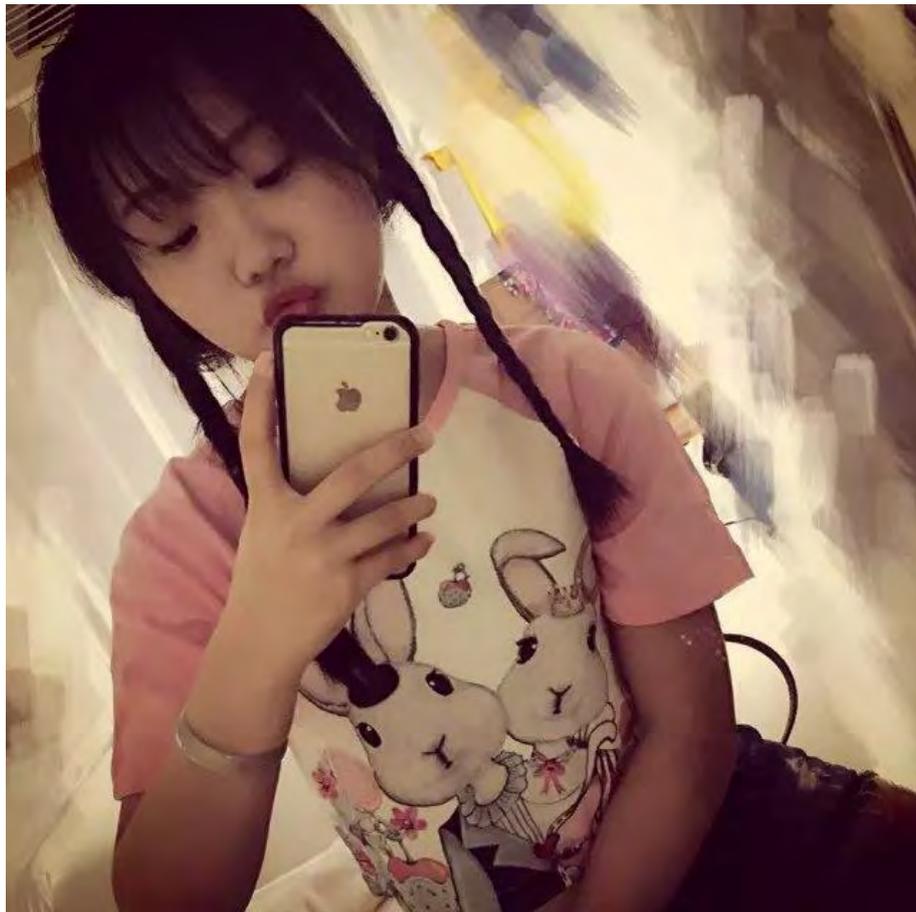

In the year 3015, the population of the earth is increasing, and the pollution is getting worse and worse. Additionally, there are a very serious problems. There is no water on the earth, or the ocean. I could only live under the ground, and couldn't breathe air. If once I touched the air I would become a zombie. For this reason, I can only live underground with my family.

I saw many of my friends contact with air and then turned into zombies. Their head became large with tusks, but they wouldn't harm humans and they have much super ability to help to humans. Moreover, whenever the evening comes, they will shine giving us light.

I observe the zombies in the ground. The zombies don't have to eat foods, and they also could survive without water. At the same times, they set up a shopping mall, called Wanda Mall. Shopping malls have karaoke, coffee bars, bars, shopping centers, when they feel unhappy, some zombies are going to sing or drink with other zombies. In addition, there are a number of female

zombies that like to go shopping. Even one day, there are two zombies getting married. There is dinosaur eruption of flame as they celebrate their wedding. It makes me feel very amazed, even though they have become zombies. I also think they are the same as human beings.

Just as I was amazed, I was awakened by my mother's voice, and this time I discover I was having a dream. I was not really in the future. Through this dream, I even hope that in 3015, this world has zombies and dinosaurs in it that won't harm people. Similarly, humans won't have to eat food or drink. They could live in this world without it. I'll look forward to the arrival of the world's future.

# The future

By Ben Chengyuan Wu

People always want go to the future because everyone has a dream about the future. If we have a time machine, we can use it go to 3015 to see what happens there. We can imagine we are in 3015 now.

In 3015, the pollution is worse. We have no water, no ocean, and can't breathe the air. It is because humans never cared about the environment. That's the reason why people are living under the ground with zombies, dragons, and alien. They can make their own life, and glow by themselves because there isn't sun under the ground. By the way, people can't see the sun on the ground too.

At first, we see people build some houses on the walls under the ground, and there they have a big pillar to brace up the ground. We call that pillar "the helping needle" because it makes people able to live under ground. Also, there is the Wanda Plaza. People can have fun there with karaoke ,coffee shops , bars , movie theaters, restaurants , super markets and shopping malls. On the other side, older people dance on the plaza.

Later, we see there are two zombies having a wedding today .A dragon is making an eruption to celebrate their wedding. Another dragon makes a fountain which it looks just like fireworks. These two dragons are a couple, and they have a child which is the flower boy for this wedding.

At that time, we see that people use super powers to go above the ground. There are still some people living on the ground, because they did nothing when people built the underground worlds. So, they can't move under the ground. Above ground is worse than under the ground. Therefore, everyone wants to move to the underground who lives above ground. That's the reason people make medicine to get superpowers that live under the ground. It like a ticket, if you have it, you can go and back between the above ground and the under the ground.

In the end, I have to say this world is a lot worse. People can't have a good life here. Therefore we have to start the protect our environment right now, so we can have a better future.

## **Outline of Outer Space 3015**

**Group leader: Frank Yifei Du**

**Group members: Frank Yifei Du, Melody Yingzi Xuan, Vy Nguyen, Carson JinLue Zou**

- I) Introduction
  - A. After 2000 years late, where will human live?
    - 1. tip of the earth
    - 2. under the earth
    - 3. outer space
    - 4. St. Johns University
  - B. I think all of people will live in space because increasing population, environmental
    - 1. deterioration, and requirements of resources, people will not live on the earth
- II) Body
  - A. support number 1
    - 1. The earth will have no ability to carry up the huge population.
      - a. With the improvement of the living standard and the development of medical
      - b. science, the people's life will become longer than now.
      - c. In 3015 years, the number of the population will exceed 120 billion.
      - d. The earth will have no ability to carry up the huge population. Migrating other
      - e. planets will is only choice of human.
  - B. Support number 2
    - 1. Due to a lot of diseases, Human will have to leave the earth
    - 2. Due to emissions generated by human activity, such as methane and nitrous oxide, accentuate the Greenhouse Effect
    - 3. Greenhouse Effect will cause global warming trend, it will exacerbate the natural disasters around the world.

4. With sea level rise, Forest disappearing, and a lot of diseases, Human will have to leave the earth that is human's first home.

C. support number 3

1. Human will have to use more and more resources to sustain development.
2. Human will have to use more and more resources to sustain development.
3. The researcher showed the analysis data that resources on the earth would almost run off around 3000.
4. Other planets have a plenty of resources for humans basic uses. So that is why we have to move to other planets.

III) Conclusion

- A. In conclusion, due to increasing population, environmental deterioration, and requirements of resources these reasons. Humans will live on the other planets to sustain their lives for generations.

---

# Outer Space in the Future

by Frank Yifei Du

One thousand years later, science and technology will be extremely developed. So that the solar system will be colonized and all of people will live in space. In that time, the

earth will be mostly set as a wildlife refuge and it will be visited by humans who live on the other planets. However, why don't human live on the earth? Due to increasing population, environmental deterioration, and requirements of resources, people will no longer on the earth.

In the first place, With the improvement of the living standard and the development of medical science, the people's lives will become longer than now. By one estimate, which may be a little optimistic, most of people's live will be over 200 years, with most of those years being vital and productive. In 3015 years, the number of the population will exceed 120 billion. The earth will have no ability to support the huge population. Migrating to other planets will be only choice for human.

Moreover, with the advent of the increasing population and number of factories, our environment will deteriorate more and more. With emissions generated by human activity, such as methane and nitrous oxide, it will accentuate the Greenhouse Effect that make the Earth become uninhabitable. Unfortunately, the greenhouse Effect will cause a global warming trend, it will exacerbate the natural disasters around the world. With sea level rise, forest disappearing, and a lot of diseases, human will have to leave the earth that was human's first home.

Thirdly, with the population increasing, and the development of technology, humans will have to use more and more resources to sustain development. In addition, the researcher showed the analysis data that

resources on the earth would almost run out around 3000. On the contrary, other planets have plenty of resources for humans basic uses. For example, Mars has vast minerals titanium, iron, and copper. The Moon has abundant silver, platinum, and uranium. So that is why we have to move to other planets.

In conclusion, due to increasing population, environmental deterioration, and requirements of resources these reasons, humans will live on the other planets to sustain their life for future generations.

# *The future Life*

by Melody Yingzi Xuan

Today, my essay is about how people live in 3015 where and why they chose to live where they do in the future. Time passes very quickly, we should think about many things. In my opinion, in the future, people maybe will move outside the galaxy and live there. Outside the galaxy will become the new earth. There we do same things on earth. We should go to school and find a job, just like before. Why we should move outside the galaxy in the future, I hope the following reason can help you understand.

To begin with, global warming will result in the earth disappearing. With the rapid development of science and technology, people's lives will become better. During the winter temperature is very low. We can open a heating system to warm up. Sometimes people go to an empty room to open the heating to keep warm. In the summer, we will also open air conditioning to

make ourselves feel comfortable. But air conditioning will release a lot of heat too. There are so many people in the world that are using air conditioning, gradually, the temperature of the earth has become more and more high, and made some glaciers melt. Then the earth will be inundated. Human beings will lose their lives.

In addition, environmental pollution is very serious. With the development of industry, there are a lot of enterprises that have grown up, these companies will emit some environmental pollution, such as toxic compounds. These seriously pollute the environment. Also there are so many cars. They not only give off exhaust of toxic gas, but also make the environment unsafe.

Lastly, the resources have shortages. The proportion of the population and resources has been out of balance, and some of the resources are non-renewable. Most people depend on water. At present people are already very nervous. Fresh water resources is very few. In the future, water resources are more likely to dry up. At that time, human beings can't live on earth.

All in all, we leave the earth in the future. We will face a lot of pressure due to environmental pollution, resource shortages, over population. So there is possibility a future life outside the galaxy.

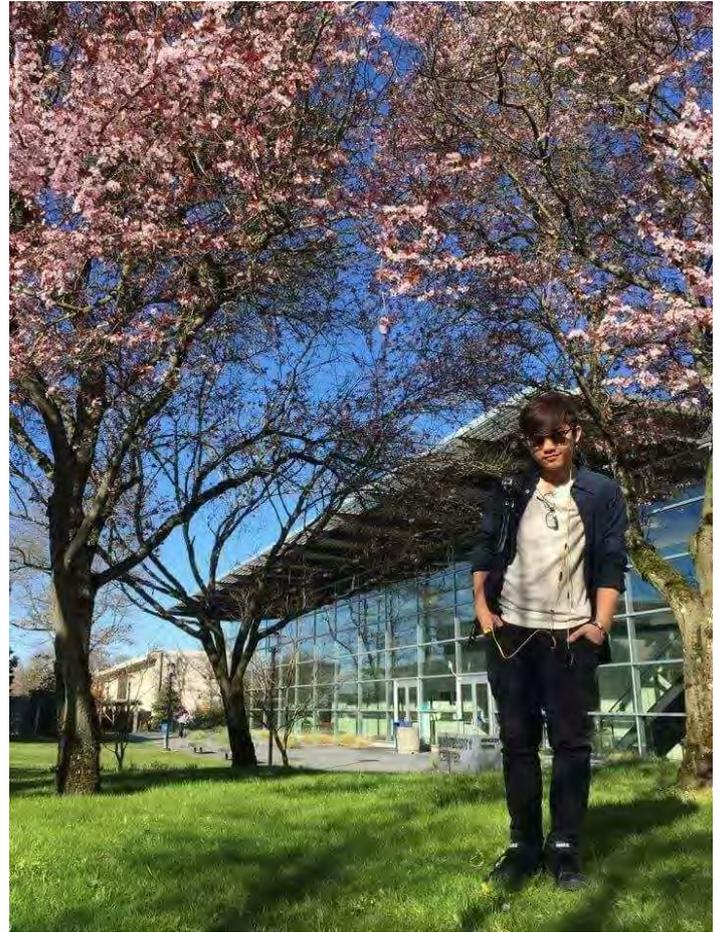

# In the 31<sup>st</sup> Century

By Vy Nguyen

In the 31<sup>st</sup> century, mankind had to leave the earth and move to another planet to live. Now-a-days, we live on the Pluto, and we have many things happen.

First, Pluto already has people, but we call them the aliens. They look like human, but their skin is blue and dark. Also, they have powers, they can control the planet, plants, light, fire and they can fly. They are very smart, they can speak all languages in the galaxy. So it wasn't hard when we talked with them. While they knew we are from different planet, they were surprised at first. After that, they helped us integrate into a new life.

Next, Pluto is an earth-like planet. But it doesn't have the sun. It just has the moon, but the moon light is blue. In addition, Pluto doesn't have water or ocean or the air. The ecosystem is abundance. The plants get energy from the moon and created space to help everything breathe. The people grew a sort of leaf. When we eat it, it helps the body become heathy, and we don't feel hungry or dehydrated. Sometimes people can eat meat from animals, but the animals are huge and bizarre. So people in Pluto need to use their power for protection for themselves when they hunt.

In addition, the science of Pluto is very advanced. They created robots and use them to go to other plants for trade and exchange.

# Where Will We Live?

By Carson JinLue Zou

We will probably relocate to another planet in 3015. Why we don't still live on the earth? I think everyone knows that in 2015 there was global warming. The global warming must destroy the earth. Now maybe we move to the planet Mars.

First the global warming affected human lives. Global warming has changed the weather. The climate temperature has been rising. There were floods in some areas. There were incidences of drought, fire and heat shock rose. This brought about more carbon dioxide and greenhouse gases into the atmosphere causing harm. The Greenhouse effect was formed early. Without the greenhouse effect, the earth's surface would have been extremely cold, the temperature might drop to minus 20 degrees Celsius, the ocean might have froze, life would have not formed. Later it became dangerous.

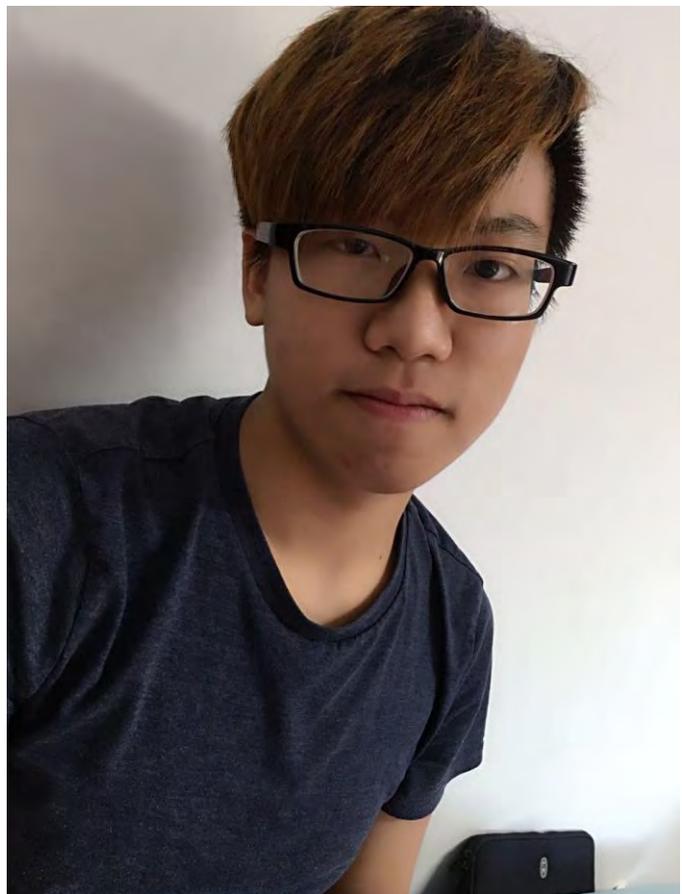

Second with global warming, the glaciers melted gradually. This made flooding. Seyed Hasineien, said, "If global warming is not controlled, in Bangladesh, nearly 20 percent of Asia, in 15 years could be flooded. So we can't live on the earth, I will move to another planet. If global warming continues, we will not have glaciers. However, we will need to find a new planet to live on."

Therefore, since the glaciers melted, the breeding of disease also grew fast. Some tropical diseases have spread to colder regions. The environment

is also growing hotter at higher elevations. This brings mosquitoes and they carry disease. This is also a big problem, so we couldn't continue to live here!

When we moved to Mars, Mars nothing. We need to transport materials to the spacecraft to Mars. We will begin to build our own house and buildings. I believe that life on Mars would be even better than on Earth. Everything will be the same as 2015.

That's why we need find a new place to live and move. Where will we live? Mars is the most likely place. It is because scientists found signs of life on Mars. I believe that we will live a life on Mars which would be better. We should make our life better.

## Outline of Outer Space 3015

**Group leader:** Thomas Hongyi,Zhang

**Group members:** Thomas Hongyi,Zhang; Sebastian Yibo,Zhao, Amber Hui,Wang, Pedro Panjie,Zhang, Guangyu,Ye

### 1) Introduction

- a) Main idea: There are a lot of difference between the future and today.
- b) Supporting point 1
  - i) Everything is able to fly.
    - (1) Car
    - (2) Building
    - (3) Human
- c) Supporting point 2
  - i) The air pollution is a big problem
    - (1) People wear gas mask
    - (2) The sky is not blue
    - (3) Scientist is trying to invent the air cleaner
- d) Supporting point 3
  - i) People don't have to eat
    - (1) People get energy from charge
    - (2) People eat food just for enjoying
- e) Concluding sentence
  - i) As the result, there are a lot of difference between the future and today.

### 2) Body

- a) First point
  - i) Topic sentence
    - (1) To begin with, everything is able to flying in the future.
  - ii) Supporting point
    - (1) The road is in the air
    - (2) Some buildings are built on the cloud
  - iii) Concluding sentence
    - (1) For the result, flying is very normal in the future.
- b) Second point
  - i) Topic sentence
    - (1) On the other hand, air pollution is a big problem in the future.
  - ii) Supporting point
    - (1) People wear gas mask
    - (2) The blue is yellow and the air is dirty
    - (3) Scientists are trying to make a machine that clean the air
  - iii) Concluding sentence

- (1) In brief, People are expect that scientists can invent the air cleaner otherwise people have to move out of earth.
- c) Third point
- i) Topic sentence
    - (1) People don't have to eat food
  - ii) Supporting point
    - (1) People get energy from charge
    - (2) People only eat food for enjoying
  - iii) Concluding sentence
    - (1) All in all, eating food is not necessary any more
- 3) Conclusion
- a) Summary sentence
    - i) For the reasons, there a lot of difference between future and today
  - b) Repeat the points
  - c) Last sentence
    - i) As time goes on, there are a lot of changes, some are good some are bad. But because of we go the future by accident. We will try to hold the good changes, and fix the bad changes. Make a better future.

# Going to the future

By Thomas Hongyi,Zhang

When I walking in the park, I found a machine that is very strange. I walked to that machine and I found it is a time machine! Suddenly the machine absorb me into the time-storm. When I woke up. It already 34<sup>th</sup> century in earth. There are a lot of differences between the future and today.

When I was walking on the street, the first thing that I saw is everything is able to flying in the future. The cars are flying in the sky, there are not bridges anymore. Some cars are flying higher, some lower. The road not crowed anymore. I keep walking on the street. I find some buildings are flying too.

They are built on clouds. All the cars are flying higher. As you can see, flying is very normal in the future.

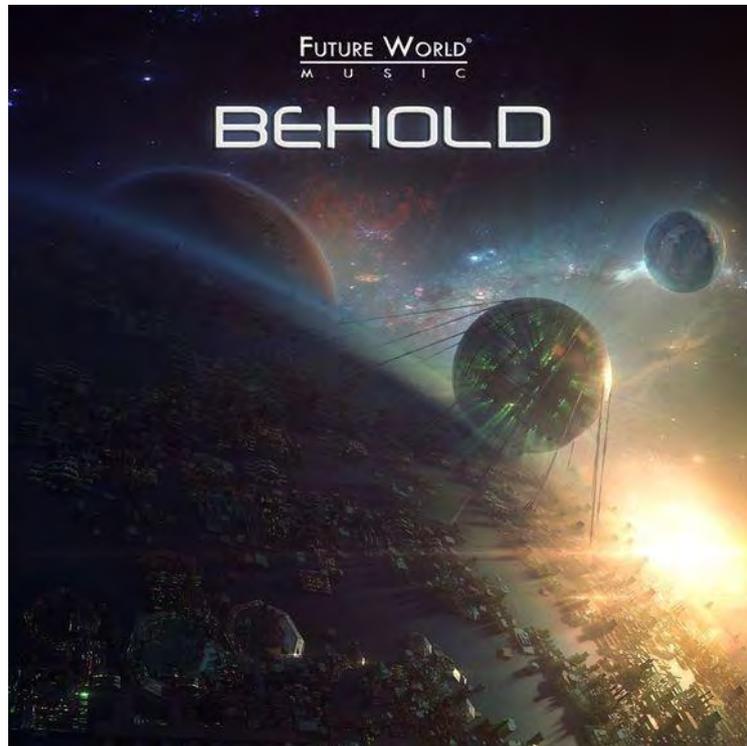

On the other hand, air pollution is a big problem in the future. The sky is not blue anymore. It is kind of brown and yellow. All the people are wearing gas masks. I thought it was because humans made too many factories. Human destroyed the air. Scientists are trying to make a machine that cleans the air. They called it “air cleaner”. In brief, People are expecting that scientists can invent the air cleaner otherwise people have to move out of earth.

From the talk, I know that People don't have to eat food. People get energy from a charge. At night, people charge energy, so they will have enough power for next day. But some people still will eat. Those people only eat food for enjoyment. All in all, eating food is not necessary anymore

For those reasons, there are a lot of difference between future and today. Everything is able to fly. The air pollution has become a big problem. People don't have to eat anymore. As time goes on, there are a lot of changes, some are good, some are bad. I learned this because of I went to the future by

accident. We will try to hold the good changes, and fix the bad changes. We will make a better future.

## THE FUTURE

By Sebastian Zhao

Today is 31<sup>th</sup> century on earth, there are lots of differences between the 21<sup>st</sup> century and today. It has amazing changes. Humans spend one-thousand years on rebuilding this “New Earth” since the earth was almost destroyed by human. However, human were very helpless until spaceman discovered another star which would suit people to live on – MARS. In the 21<sup>st</sup> century, the spaceman discovered water in MARS. After a long time a space agency did research and exploring. Finally, they concluded that Mars was the second place that people could live. Moreover, they created a ship which could transport people to Mars. In this way, earth could rebuild quickly because the population was not on earth, so earth improved. No more air pollution could ruin the earth.

In the first place, we are talking about the earth in 21<sup>st</sup> century, people always wore gas masks, and the sky was not blue. The scientist trying to invent an air cleaner before the new earth was discovered. In the 34<sup>th</sup> century, the new earth on mars is like an advance factory, everything is changed. Cars could fly in the sky. Flying is very normal in the future. Cars have their own

road like a pipeline. All the buildings are skyscraper, no more trees, flowers and glass. However, people could use the sun to make the oxygen, and absorb the carbon dioxide into the container then let it out in the universe. Also, people don't drive on a road anymore. There will not be the pollution from automobiles. We can vent gas into space.

There is no doubt that people are divided into two groups. Half live in the earth, and the other people live on the Mars. Additionally, people live in the earth are different from those on Mars. On the Mars people have to use breathing machine, because the atmosphere on mars is very thin. While earth people are not breathings. Furthermore, engineers created the pathway that could connect Mars, and Earth. Planes could fly through these places. Moreover, Mars people could visit the earth. People don't have to eat food. They could get energy from a charge. They have a resistance to every virus. They have advance clothing which could call people and is self-energizing.

Last of all the earth's reduced volume is about 30% like mars, and people sacrifice 30% of the place to rebuild Mars more wonderful new earth. As time goes by, there are a lot of changes. Some are good, some are bad. In the end, people have a better life than before because people could create more things even though they have a survival crisis in their life.

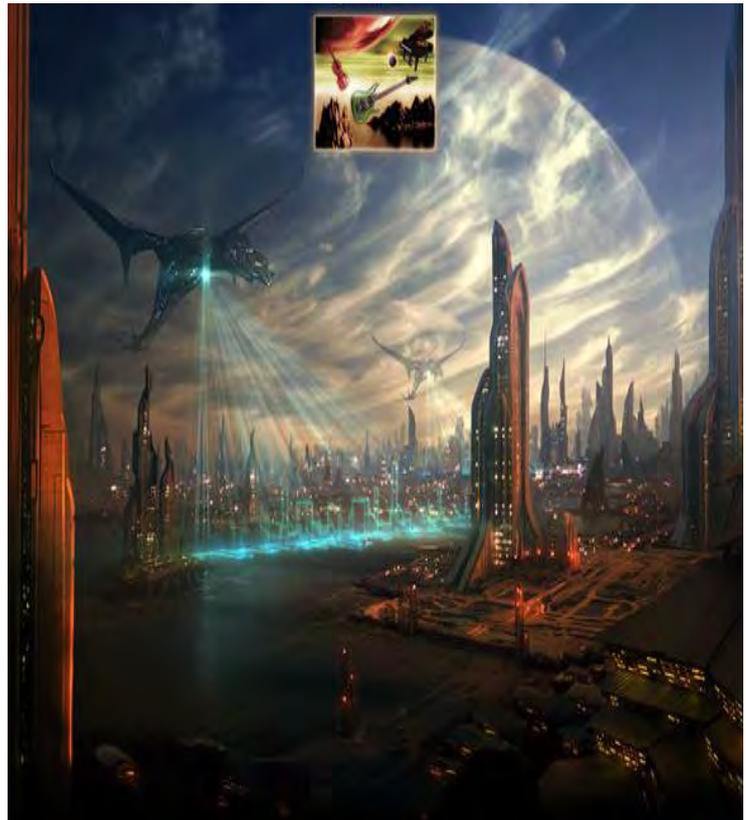

**Our New World**

By Amber Hui Wang

Now it is 3015. Everything is different from 2015. Everything can fly such as car and building. Besides the great

development of technology, the air is polluted. The human body goes through a great change. We became robots. We do not need to drink or eat. We supplement energy just by charging, so food is not necessary. That is so interesting!

To begin with, everything can fly. In 3015, we also live above the ground, but some buildings such as our office, some park and school are building on deep clouds. Thus, in order to go to school or work we need flying transportation such as car or flying sliding platforms to save us time. Besides, this way is very safe, so we never have traffic accident after our transportation can fly. Also, we just have some rules about flying such as people cannot stop on the air road, and the speed rate is limited. As a result, flying is very normal in the future.

On the other hand, air pollution is a big problem in the future. People must wear face masks, because there are many poisonous gases in the air. People breath this kind of gas will have some physical change. Also we supplement energy through charging. Besides, the sky is blue and the air is dirty. We have realized these problems, then, we try to change this bad situation through science and technology. In brief, we are expecting scientists to improve the air otherwise we just can move to another star.

In the end, people do not need to eat food and drink water. Because of the air problem, some poison gas make our body physically change. We get energy from charging. We also test delicious food, but it is just for fun. Our babies, also need to drink breast milk from their mother. Never the less, because of the development in this area there is improvement. They can draw the same composition like breast milk from cow's milk or ewe's milk. All in all, eating food is not necessary anymore.

To sum up, there are many differences from before. As time goes on, there is a lot of change, some are good, but some are bad. However, because we go to the future by accident, we should try to hold the good things and fix the bad changes to make a better future.

# Going to the future

By Guangyu, Ye

I always watched cartoon when I was a child, and I remembered one of the most interesting things-----a time machine. It can take you to the time you want, I think it is really amazing. One day, when I was sleeping, and there was a light which covered my eyes. Then I was taken to 3015.

I realized there are many differences between the future and today. Everything is able to fly in the sky, such as human, car and building. The road is not just on the ground. It is in the air. Some building are even built on the clouds. There are also many people flying in the sky. I think it is just one of dreams for people. But it is very normal in the future.

On the other hand, air pollution is one of the biggest problems in the future. There more and more cars driven by people. The quality of the air becomes much worse. Even people need to wear gas mask when they go outside. They have to do this because they will get ill without it. The sky becomes yellow like the crack of doom. The air is also very dirty, many people cannot stand it. The scientists are trying to make a machine that can clean the air. In brief, people

expect that scientists can invent an air cleaner; otherwise people have to move out of earth.

People don't even have to eat food in the future. People can get energy from a charge. I think it is really nice. People can live without the food and they don't need to think about what to eat for breakfast, lunch and dinner. It doesn't mean people cannot eat. They also can eat, but just for enjoyment. They can eat anything which is delicious. All in all, eating food is not necessary any more.

There are many differences between the future and today. As time goes on there are a lot of changes; some are good some are bad. We went to the future by accident. We will try to hold the good changes, and fix the bad changes.

Let's make a better future.

# The future

By Pedro Panjie Zhang

With the development of society, people will be changed after a thousand year. It is surprising that people do not need to eat anything, they just use a charge. They seem like robots. Yet, people need to breathe by gas mask, because the environment is so bad. In the future, people will live in caves, because there was a star wars and people must fight with zombies. Fortunately, people have high-technology, so they can they can live with difficultly above ground.

After a thousand year ago, we can't image that people will fight with zombies and extra-terrestrials. There are some kinds of zombies and extra-terrestrial who are bizarre. For example some zombies have 4 or 5 eyes and many legs. Zombies want to kill everybody that occupies the earth. Of course the government will give people an reward that you will get your charging for free, if you kill many zombies and extra-terrestrial. So, most people fight with them. Unfortunately, some people will die by zombies and extra-terrestrials.

This is an unjust world after a thousand year. Some rich people think charging is boring. So there is some high-technology to serve these people whom are rich. For example, some mechanics can absorb some delicious food from air. Also caves are so expensive. If poor people want to live in cave, they must kill many zombies and extra-terrestrial. So the life style doesn't change, only the high- technology is changed.

In the future, people don't care about the environment of earth, so the environment pollution will get worse and worse. Now everybody should care about the problems of their environment.

Thank you for reading our  
stories.
