

Microsoft Windows XP Automatic Updates

Microsoft Windows XP Automatic Updates are drivers, security fixes, critical updates, the latest Help files, and Internet products that keep your university laptop up-to-date. Information Technology selects the Microsoft updates that will be put into effect here at St. John's University. Microsoft Windows XP updates as well as McAfee Virus Protection Software Updates are loaded to your university laptop as part of the logon process. These updates will occur whether you logon via the wired network or the wireless network.
