

ST. JOHN'S
UNIVERSITY

COLLEGE OF
PROFESSIONAL STUDIES

Bachelor of Science Health and Human Services

THE HUMAN TOUCH

The service professions are among today's fastest growing fields. In fact, employers in every field seek professionals who demonstrate the knowledge and skills for which the service professions are known. Whether they recruit for social work or law enforcement, government or education, employers want managers and staff with the interpersonal skills and understanding of human dynamics crucial to every organization's success.

You can prepare for the profession and related fields through the Bachelor of Science Degree Program in Health and Human Services at St. John's University. Offered by our College of Professional Studies, the program provides a solid foundation in the theory and practice of health administration, as well as the social and behavioral sciences. Students learn how these fields promote cultural awareness and sensitivity by developing social and health policies, utilizing local resources, and serving individuals, families, and communities.

THE PROGRAM

The 129-credit program stresses health, social, and behavioral science concepts, interpersonal communication skills, and ethical values needed for the profession.

There are two concentrations: Human Services and Health Services Administration. Both combine classroom theory with valuable internship experience so that students are prepared to become leaders in their fields. Graduates are able to perform therapeutic, preventive, and supportive functions with diverse client populations.
