FIRE SAFETY BULLETIN

Building Fire Safety Features

ST. JOHN'S UNIVERSITY
UNIVERSITY LIBRARIES
Health Education Resource Center

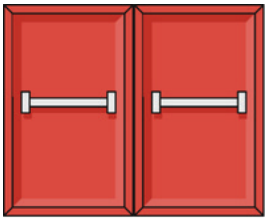

Department of Environmental Health and Safety

Office of Fire Safety

Our campus buildings are equipped with a variety of features that are designed to stop the spread of, detect, or suppress fire.

Fire Doors

Fire doors help stop the spread of smoke or fire. They protect corridors and stairwells, and should remain in the closed position.

Smoke Detectors

Smoke detectors are designed to detect low levels of smoke and sound an alarm. Most campus smoke detectors are connected to the building's fire alarm system.

Sprinklers

Sprinklers can extinguish a fire before it has time to spread. At a certain temperature, they operate quickly to allow water flow. Sprinklers effectively extinguish or minimize a fire. Do not hang anything from the fire sprinklers. This will cause flooding.

Note: *Do not tamper with any fire alarm equipment.*
